Text Analyzer Program

① Brainstorm :

- Word Cloud
- Java equivalent of Python's dictionary

Word Cloud

- If word in dict, value += 1
  Else, append and value = 1
- Sort Then Print

② Design:

- Scanner to read the file
- TreeMap to store values
- entrySet() method to sor

③ Implement ~~replace All ()~~ & test   to clean u ←

test ① Tree map and sort work
Results are skewed by spec

test ② Everything worked :)
